

iHR[®]
HR Interface

iHR

Boost productivity with automated HR data bridging.

iHR automatically keeps employee-related information at par between ISOtrain and your industry-standard HR software, bridging the maintenance gap without human intervention and keeping you in compliance with regulatory requirements.

Wizard Approach

Follow iHR's step-by-step setup to configure ISOtrain's interaction with your HRS. Map records, set file locations, customize tracking, versioning, output preferences, and establish ownership with electronic signatures and email notifications.

Schedule Processing

Perform an initial load, then schedule automatic HR uploads into ISOtrain. Scripts handle data access, selection, validation, error tracking, notifications, and direct uploads, including security updates, without user involvement. You can also manually trigger uploads for immediate processing.

Automated Data Validation

Eliminate data entry errors with automated uploads and validations, fully controlling which HRS data is imported into ISOtrain. Maintain data accurately and efficiently, managing errors via logs, emails, and reports. iHR boosts productivity, giving HR personnel more time for their tasks.

Seamless HR Integration

Access iHR easily with the same ISOtrain credentials. Seamlessly integrate with multiple HR systems, maximizing resources while ensuring compliance with industry regulations.

Customize your Data Definition

Define file and record mapping for each HR system to sync with ISOtrain. Specify uploads from text files or interface tables, field attributes, defaults, required codes, record selection criteria, processing flags, error handling, and output file placement, prefixes, and sizes.

Customize your Processing

Set up a recurring upload schedule by configuring jobs with start date, day, time, and frequency. Specify input/output file locations, error logs, upload management, termination logs, version tracking, and electronic signature audits.

Customize your Notifications

Select the notifications you wish to receive, along with the delivery method and destination. Configure email domain, SMTP settings, and customize messages for uploads, errors, and restrictions. Automatically receive update details to ensure cross-application compliance.

FDA Compliant

ISOtrain ensures compliance with FDA, cGMP, CFR 21 Part 11, and other regulations through robust security management, including login, electronic signatures, and audit trails. All upload and validation activities are automatically tracked, documented, and available for audits.
