## Manage your Reporting Requests

Create custom report queues by selecting individual or groups of ISOtrain reports for batch processing, or allow iReport to automatically collect all user scheduling requests. Once report criteria and execution parameters are defined, iReport generates and delivers the report at the scheduled time to the requester.

## Manage your Schedule

Manage your reports with iReport's centralized schedule, featuring today's reports and a calendar view. View, filter, print, and navigate your report queue, manage selected dates, and update report statuses. Specify execution parameters, handle errors, and receive logs and email notifications upon execution.

## Manage your Reporting History

Stay informed about produced reports, their timestamps, and recipients with iReport's automatic Service/Execution Log and Events/Errors Log. You can also use the Service Log to adjust a scheduled report's status at any time.

## Complete Reporting Integration

Access iReport through ISOtrain's reporting features with the same login credentials. Boost productivity with automated report request collection, scheduled execution, and timely delivery of accurate reports directly from ISOtrain's database, all without human intervention.

## Customize your Selection Criteria

Predefine user selection criteria for reports within ISOtrain or use iReport's filters, which mirror ISOtrain's functionality. iReport ensures your criteria are applied, delivering expected results directly from ISOtrain's database.

## Customize your Processing

Customize recurring report processing by specifying execution dates, times, frequency, and owner. Set output and delivery options, including email notifications for failures and retries. iReport will use your criteria to query ISOtrain's data, generate the report, and deliver it to the right person at the right time.

## Receive E-mail Notifications

Receive automatic email notifications when a report fails to execute or when retries are attempted. With iReport, your reports run automatically while keeping you informed and in control.

## FDA Compliant

Ensure compliance with procedural and industrial regulations—such as FDA, cGMP, and CFR 21 Part 11—under ISOtrain's umbrella through robust security management, login, electronic signatures, and audit trails. All reporting activities are automatically tracked, documented, and available for auditing.
